

# Integrationsformer

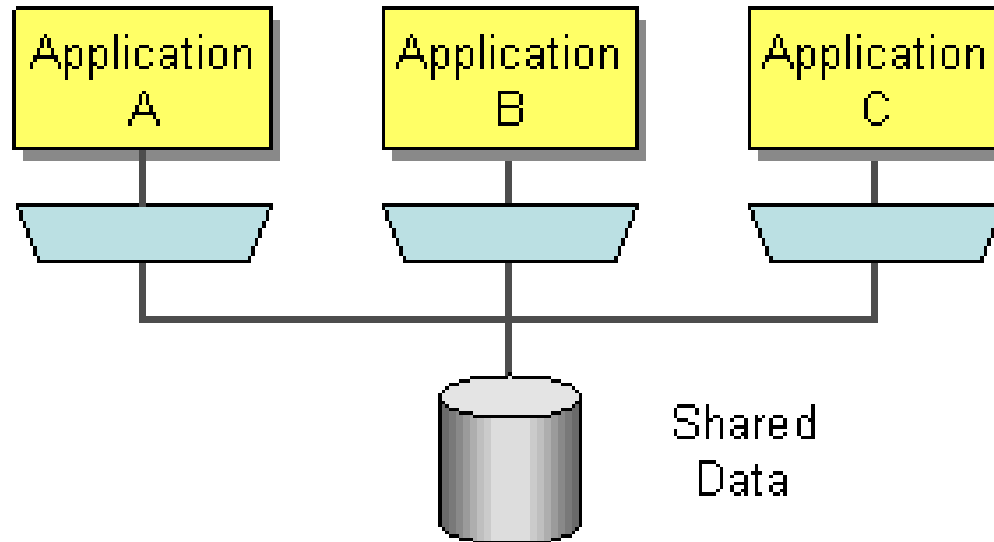

# File Transfer

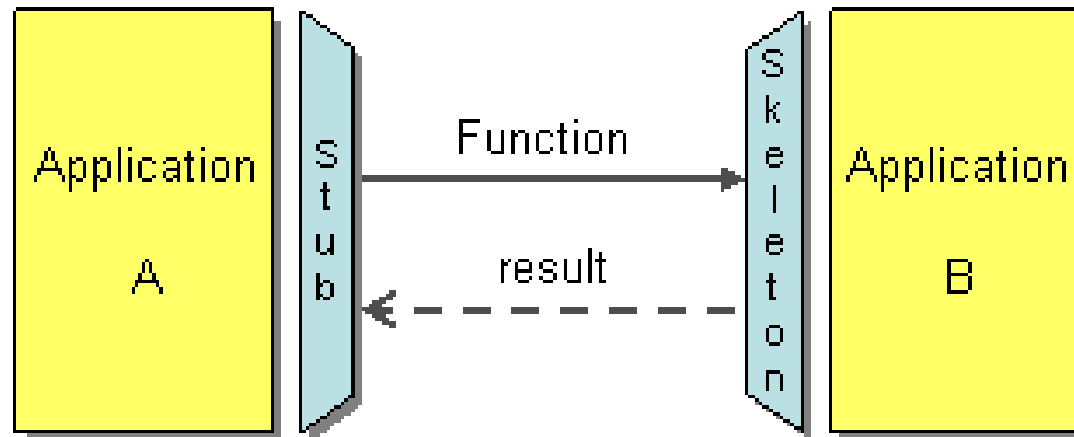

Have each application produce files containing information that other applications need to consume. Integrators take the responsibility of transforming files into different formats. Produce the files at regular intervals according to the nature of the business

# Shared Database

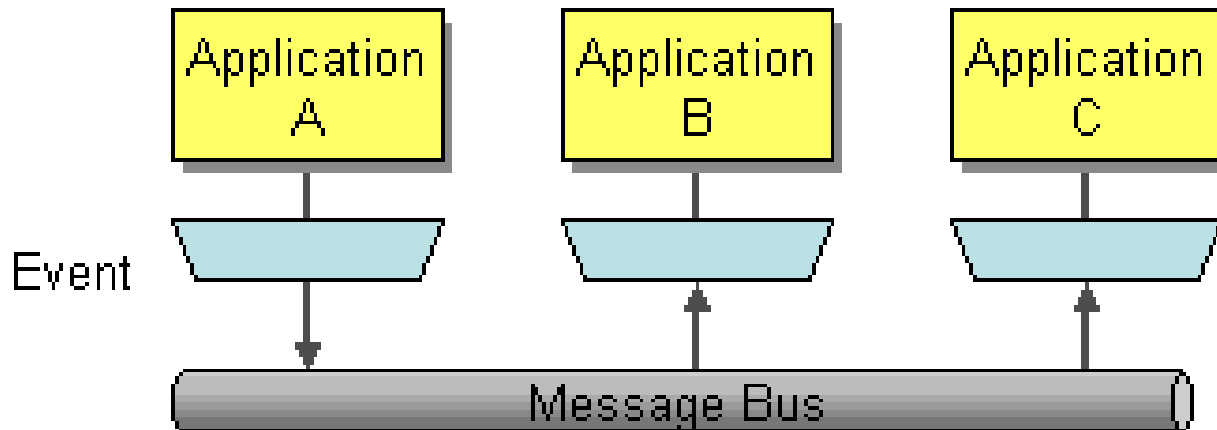

Integrate applications by having them store their data in a single Shared Database

# Remote Method Invocation

Develop each application as a large-scale object or component with encapsulated data. Provide an interface to allow other applications to interact with the running application

# Messaging

Use Messaging to transfer packets of data frequently, immediately, reliably, and asynchronously, using customizable formats.

# Messaging

Spørgsmålene er

- Hvordan flyttes datapakker?
- Hvordan ved du hvor data skal sendes hen?
- Hvilket dataformat skal anvendes?
- Hvordan forbindes et program til Message systemet?

Svarene kommer snart
